

One Time. For a Lifetime.

WATCHMAN™

LEFT ATRIAL APPENDAGE CLOSURE IMPLANT

Ready to leave blood thinners behind?

The WATCHMAN Implant is a safe, minimally invasive, one-time implant for people with non-valvular atrial fibrillation (AFib) that can reduce stroke risk – without the need for lifelong blood thinners.*

My doctor said the WATCHMAN Implant might be right for me. What's next?

Answer a few questions to get personalized resources, understand the procedure, meet real people living with the WATCHMAN Implant, and more.

Monday to Friday, 8 a.m. to 5 p.m. CT

Over half a million people have left blood thinners behind with the WATCHMAN™ Implant.

Notes:

Brief Summary

The WATCHMAN FLX and WATCHMAN FLX Pro Devices are permanent implants designed to close the left atrial appendage in the heart in an effort to reduce the risk of stroke.

With all medical procedures there are risks associated with the implant procedure and the use of the device. The risks include but are not limited to accidental heart puncture, air embolism, allergic reaction, anemia, anesthesia risks, arrhythmias, AV (Arteriovenous) fistula, bleeding or throat pain from the TEE (Trans Esophageal Echo) probe, blood clot or air bubbles in the lungs or other organs, bruising at the catheter insertion site, clot formation on the device, cranial bleed, excessive bleeding, gastrointestinal bleeding, groin puncture bleed, hypotension, infection/pneumonia, pneumothorax, pulmonary edema, pulmonary vein obstruction, renal failure, stroke, thrombosis and transient ischemic attack. In rare cases death can occur.

Be sure to talk with your doctor so that you thoroughly understand all of the risks and benefits associated with the implantation of the device.

*In a clinical trial >96% of patients were able to discontinue their blood thinner 45 days after getting the WATCHMAN Implant.
